DETAILED ACTION***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4, 5, 7-21, and 23-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Suarez.

**FIG 1****FIG 2**

Suarez discloses a movable toy comprising a first body part member (10); and a second body part member (31), a joint is defined between the first and second body part members (10,31) to enable relative motion between the first and second body part members (the first and second body parts are enabled by the socket (20) and plug (ball) (13)), the joint comprises a plug portion (13) secured to one of the first and second body part members (10,31); and a socket portion (20) secured to the other of the first and second body part members (10,31) and adapted to receive the plug portion (18), the

Art Unit: 3712

socket portion (20) includes multiple spaced apart protrusions (22a,22b,22c,22d), the joint being adapted so that an operative surface (the outer surface portion of reference numeral 13) of the plug portion (13) is urged into contact with ends of the protrusions (22a,22b,22c,22d) so as to create friction therebetween (*the fingers snugly grasp the body 18, col. 2, line 63-66*); and a separately manufactured removable insert (14) adapted to secure the plug portion (13) within the socket portion (20); the protrusions are formed as ribs that extend toward the operative surface of the plug portion (13) that extend toward the operative surface of the plug portion from a wall of the socket portion (18); each of the multiple contact regions are formed at an end of a protrusion that extends toward the operative surface of the plug portion (13); the protrusions (ribs) extend toward the operative surface of the plug portion at angles to one another; the operative surface of the plug portion is convex (col. 2, lines 36-39) and at least one of the multiple distinct contact regions is concave (col. 2, lines 36-39); the socket portion (20) is configured to capture and hold a head (18) of the plug portion (13) within the socket portion (20) (col. 2, lines 63-66); the socket portion (20) is adapted to urge the head (18) of the plug portion (13) against the multiple distinct contact regions (22a,22b,22c,22d); the plug portion (13) includes a head (18) and a shaft (12) extending therefrom, the shaft (19) being narrower in width than the head (18); the shaft (12) extends from the head (18) through an opening (the female threaded portion of reference numeral 14); the opening (the female threaded portion of reference numeral 14) is sized smaller than the head (see Figure 1, for example); the shaft (12) extends away from the head (18) between the first and second body part members (10,31)..

Allowable Subject Matter

Claims 2, 3, 6, 22, 27, and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
